

## Desktop Telemedicine Solutions

Our **Desktop Telemedicine Solutions** are simple solutions for programs that require basic clinical evaluations needs and plan to have either a dedicated space to do consultations or want to take the kit "on the go". The flexibility of these kits allow you to do basic primary care check-ins or house calls. Both systems can be used at patient/clinic side and can come equipped with integrated medical devices, or as a remote physician's consultation stations with no additional medical devices.

### Deployable Telemedicine Kit

The Deployable Telemedicine Kit is a simple compact solution that includes our AGNES Connect platform and the medical devices and equipment set up for primary care virtual visits. The flexibility of this small, desktop solution is that you can start small with the medical devices you need and then build on from there. This solution is ideal for applications such as in-home health visits, school-based clinics, or community health services.

#### Product Features:

- Primary Care Bundle includes: Multipurpose Camera & Scope, Interactive Stethoscope, Vital Signs Monitor, Digital Spirometer and AGNES software license.
- Tablet docking station includes: Quad Core i7 Processor Tablet PC, Win10 Pro. Docking & Power Station with (5) USB ports, HDMI, DP, Ethernet port. Integrated 1080p 5MP front facing HD camera.

### Desktop Station: All-In-One

The Desktop station is a convenient set up for applications such as school-based clinics, mobile vans, or for a remote specialist who needs a dedicated desktop solution for their telemedicine consults. It can be used stand-alone for video virtual visits (patient or remote doctor side), or pair it with integrated medical devices, AGNES Connect, and a PTZ camera.

#### Product Features:

- A space-saving sleek solution with powerful computing from 8<sup>th</sup> generation processor and DDR4 memory.
- Anti-glare technology ensures a clear, vibrant screen from any angle during a virtual visit.
- Integrated video camera and audio speaker for clear video conferencing communications.
- Option to integrate medical devices as needed for clinical examinations.

*Customize the Configurations to  
Your Clinical Evaluation Needs*

Clinical quality medical images and data collected during the patient encounter are key elements to providing the best possible care via telemedicine.

We provide various medical devices and equipment that can be integrated into our AGNES Connect telemedicine platform, as well as third-party platforms.
