

Treat Your Patients in Place with Telemedicine

Proven Benefits of Telehealth in Post-Acute Care Settings:

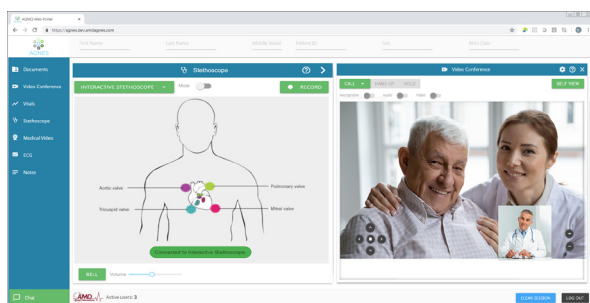

- Protects patients and healthcare workers during COVID-19 pandemic
- Reduces hospital re-admissions and patient transports
- Increases access to specialty care for high-risk patients
- Improve the coordination of care between hospitals and facilities
- Increases family satisfaction, referral base, and competitive advantage

Improve Clinical Outcomes by Treating Patients' in Place

By using telemedicine, patients and in-facility staff have the opportunity to consult with specialists from afar and assist in treating chronic conditions at the critical times when their conditions might flare. Not only does this keep resident patients within the facility, it also reduces the risk of infections or complications from traveling to another location for care.

Reduce Readmission Rates with Collaborative Virtual Visits

 AGNES Connect is a secure and encrypted web-based telemedicine platform that enables remote clinical healthcare providers to connect through video conferencing with the on-site clinician, and do a medical assessment on the patient at the care facility.

- Matches the experience and clinical workflow of in-person exams.
- Streams medical data from fully integrated and connected medical devices, including live ECG analysis, heart and lung sounds, and more!
- Integrates directly with PointClickCare for efficient workflow and documentation.
