

## AGNES Connect®

A Collaborative Patient Assessment Tool for Enterprise-Wide Telehealth Applications

- **100% Real-Time Clinical Examinations** via a Virtual Platform
- **Capture and Share** Clinical Data from Integrated Medical Devices
- **Enterprise-Wide Scalability & Security**
- **Complete Physician Mobility** and Remote Camera Control
- **Integrates to EMRs** for patient query and session documentation

### What Is AGNES Connect®?

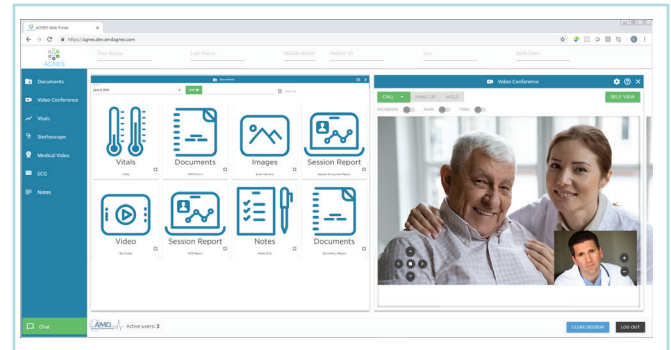

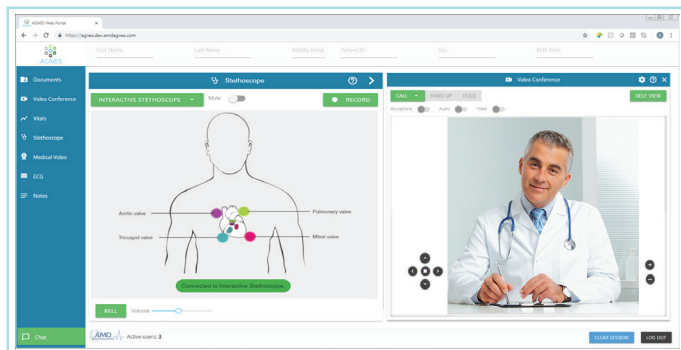

AGNES Connect® is cloud-based telemedicine software that enables remote clinical healthcare providers to capture and share medical device data, exchange documents, stream medical images in real-time, and participate in a live video conference - all in a single web-based platform.

### How Does it Work?

AGNES Connect® is operational in minutes - no need to configure back-end servers. The cloud-based platform aggregates clinical device diagnostics, vital signs data, encounter documents and live video conferencing and then securely exchanges that information in real-time to the remote consulting physician.

## Cloud-Based ... Scalable ... Customizable

**Medical Video:** Allows you to transmit live medical images and video from your integrated medical scopes and devices in 100% real-time.

**Stethoscope:** Easily connect a stethoscope to stream live heart/lung sounds to the remote physician giving both the onsite clinician and software-based control for frequency ranges and volume.

**Session Documents:** To capture the information gathered during the patient assessment in a format that can be shared or saved into an EMR system.

**Video Conferencing:** Clinician and remote specialist can teleconference, using the built in point-to-point Video Module. The remote specialists has full PTZ camera controls as well.

**Vital Signs:** Allows you to integrate medical data directly from an external vital signs monitor, so you can include and capture this information as part of the exam session, for the physician to review and evaluate.

**Universal HL7 and EMR Filing:** Seamlessly export information collected during a patient session to a single HL7, FHIR based file. The HL7 module eases the integration with your organization's infrastructure by providing a file that can interface with EMR systems. In a single step, information is ready to be stored with the patient's record.

### Integrates with Medical Devices to Capture and Stream Live Clinical Data:

Multipurpose Camera & Scope System

Digital Stethoscope

Vital Signs Monitor

Ultrasound Probe

Other Scopes & Devices:
